

SHOE CARE

Please refer to the below chart after determining your material type in order to properly clean your shoes.

VEGAN FRIENDLY

Our Rieker and Remonte easy care material are some of the best vegan friendly materials in Canada. With these easy care materials, a simple damp cloth with mild soap will remove any dirt, salt, or grease stains. **DO NOT SPRAY OR APPLY ANY OILS, WAX, OR FINISHING PRODUCTS TO THESE MATERIALS.**

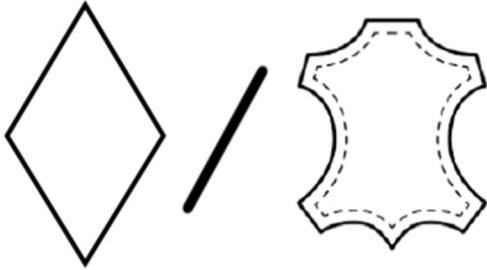

LEATHER

It is recommended to always protect your leather footwear before initial wear. This will assist with the longevity of the upper. Please note that different types of leather require different care products, for example suede and nubuk. Be sure to always read and follow the label of the product use. Here is how we recommend keeping the leather upper clean:

1. Leather lotion and leather cleaner
2. Polish (of appropriate color)
3. Protective Spray

4. If applicable use a suede brush or block

COMBINATION

Caring for a shoe of combination material can be tricky. If you are not able to differentiate the leather from the synthetic sections, we highly recommend that you consult with our professional retailers or use only the vegan friendly care procedure.

RIEKER AND REMONTE TEX

Water repellant MEMBRANE (a layer found between both the inner and outer material) that keeps feet dry while wicking moisture out. Rieker and Remonte Tex can be found in both leather and vegan friendly shoes.

NOTE: The materials are water resistant to zipper height. Water still may penetrate the zipper, buckles, textiles on all Rieker and Remonte products.
